BRIGHT TV SALES ANALYSIS

Presented by Keneuoe Makhongoane

CONTENTS

1. Introduction
2. Channel revenue performance and audience activity trends
3. Revenue distribution by age group
4. Revenue contribution by province
5. Most active day of the week
6. Key business insights
7. Recommendations

1.INTRODUCTION

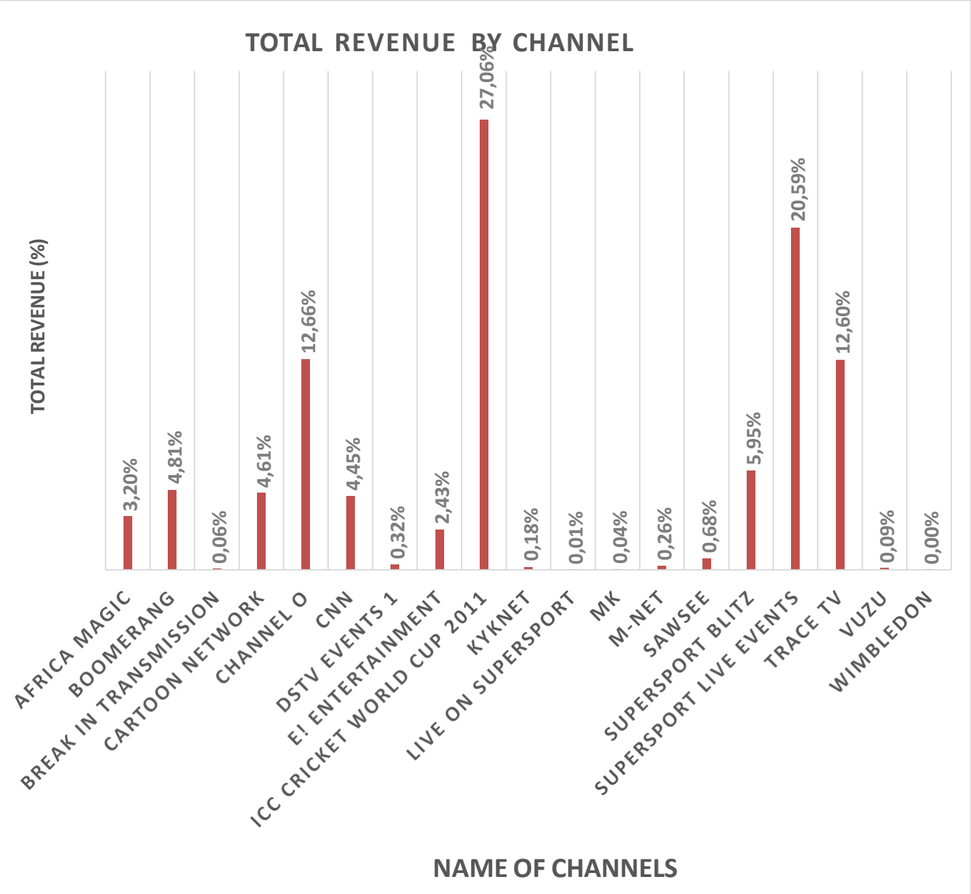
Bright TV’s CEO has set a key objective for this financial year: to grow the company’s subscription base. To support this, the dataset of Bright TV's user profiles and viewership dataset was analyzed, which contains session-level consumption records.

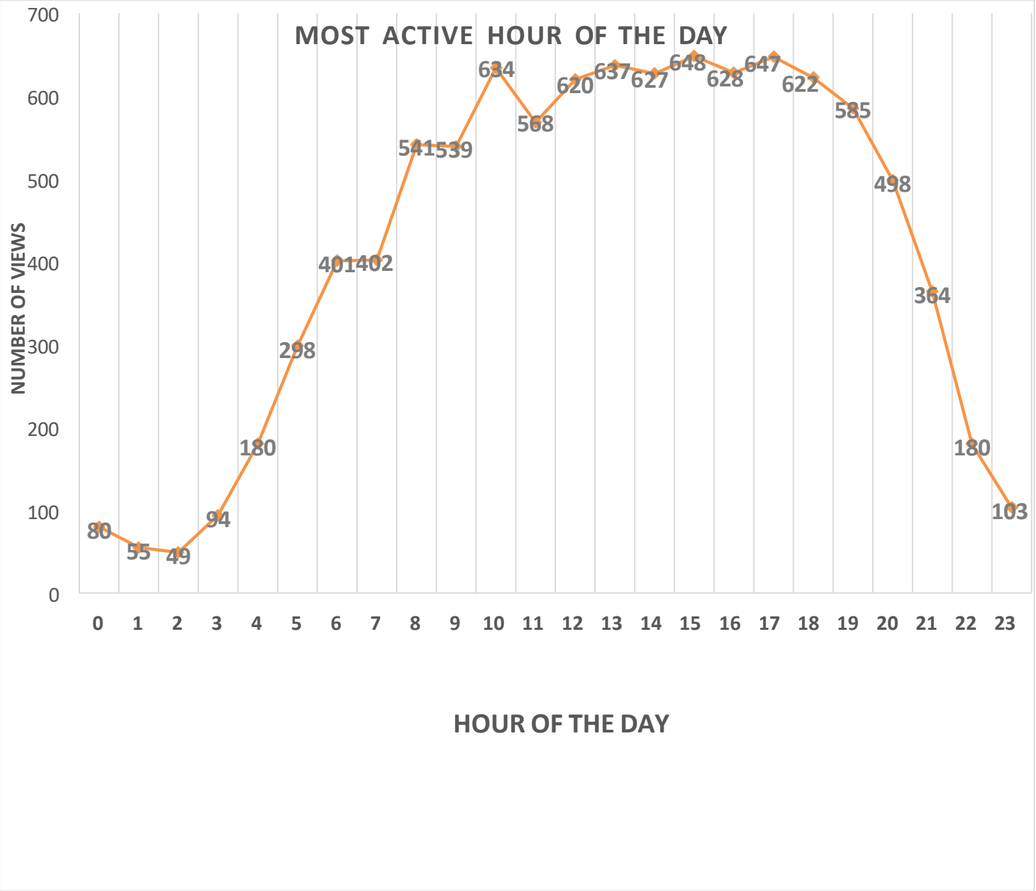
The aim of this presentation is to provide insights that will help the CEO drive user growth and increase overall consumption.

This presentation covers:
- User and usage trends
- Factors influencing consumption
- Content recommendations for low-consumption days

2. Channel revenue performance and audience activity trends

- Major sports channels such as ICC Cricket World Cup and SuperSport Live Events generate the highest revenue.
- Audience engagement peaks between 10:00 and 17:00, indicating strong daytime viewing behaviour.
- Activity begins rising early in the morning and declines significantly after 18:00.





3. Revenue distribution by age group

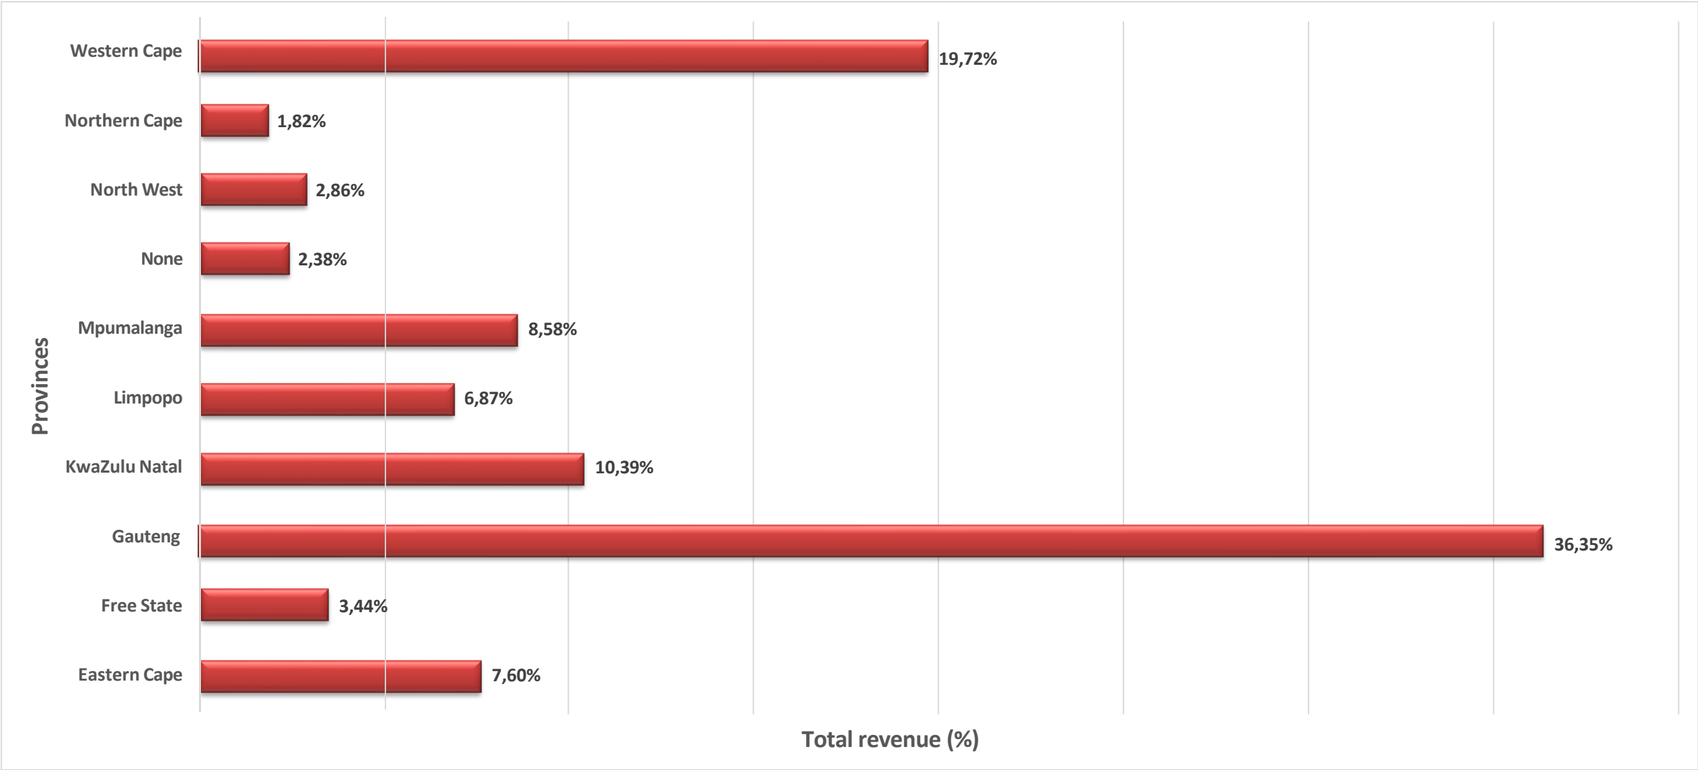
- The highest revenue comes from adults (37%) and youth/young adults (31%) showing that these segments are Bright TV's core viewers.
- The lowest revenue comes from seniors (5%) and young viewers (7%), likely due to lower engagement or fewer subscriptions in these age groups.
- Revenue is primarily driven by Adults and Youth/Young Adults, who together account for nearly 69% of total revenue, highlighting them as the platform's key audience segment.

AGE GROUP CLASSIFICATION TABLE

Age range	Age description
0-19	Young
20-29	Youth/ young adults
30-39	Adults
40-49	Middle age
50 >	Seniors

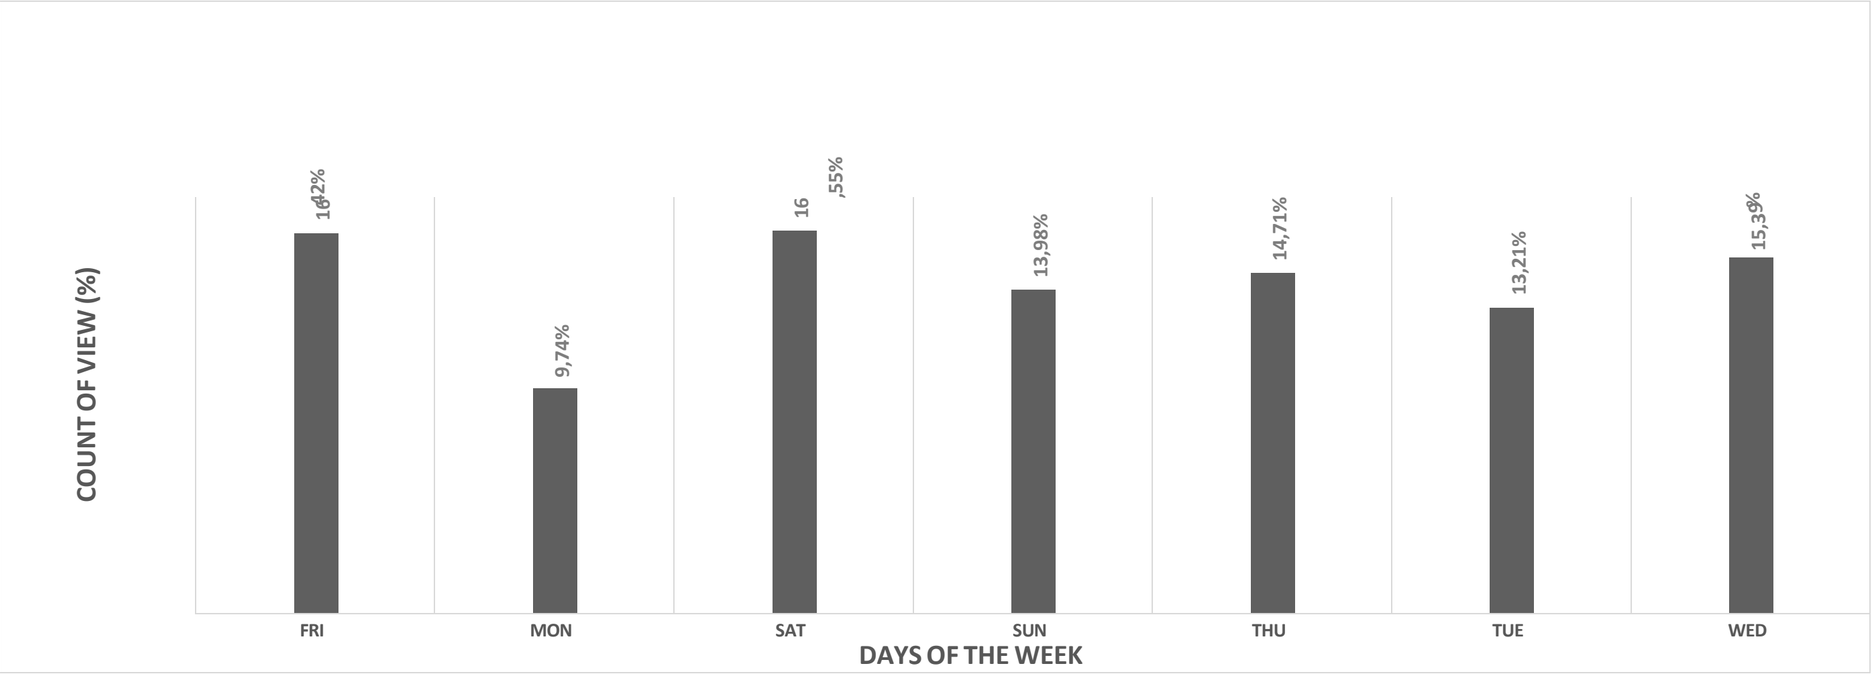
4. Revenue contribution by province

- Gauteng (36%) and Western Cape (20%) dominate revenue, showing these provinces have the strongest subscriber base and highest engagement.
- KwaZulu-Natal (10%) and Mpumalanga (9%) contribute moderately, while provinces like Northern Cape (2%), North West (3%), and Free State (3%) generate minimal revenue, suggesting lower market penetration in these areas.



5. Most active day of the week

- Viewers' activity is highest on Saturday (16.55%) and Friday (16.42%), with Wednesday (15.39%) also showing strong engagement, while Sunday (13.98%) and Tuesday (13.21%) have moderate activity, and Monday (9.74%) records the lowest.
- To maximize reach, high-value content and promotions should be prioritized on Friday and Saturday, while mid-week programming can be optimized to boost engagement on slower days like Monday.



6. Key business insights

Channel revenue performance and audience activity trends

- Live sports channels generate the highest revenue because they attract large real-time audiences. Many sports events are scheduled during the day, which explains why viewer activity and revenue peak between 10:00 and 17:00.

Revenue distribution by age group

- Adults (37%) and young adults (31%) make up the majority of Bright TV's audience. This is likely because adults have higher purchasing power, while younger viewers consume more entertainment and sports content. Seniors (5%) and younger viewers (7%) show lower engagement

Revenue contribution by province

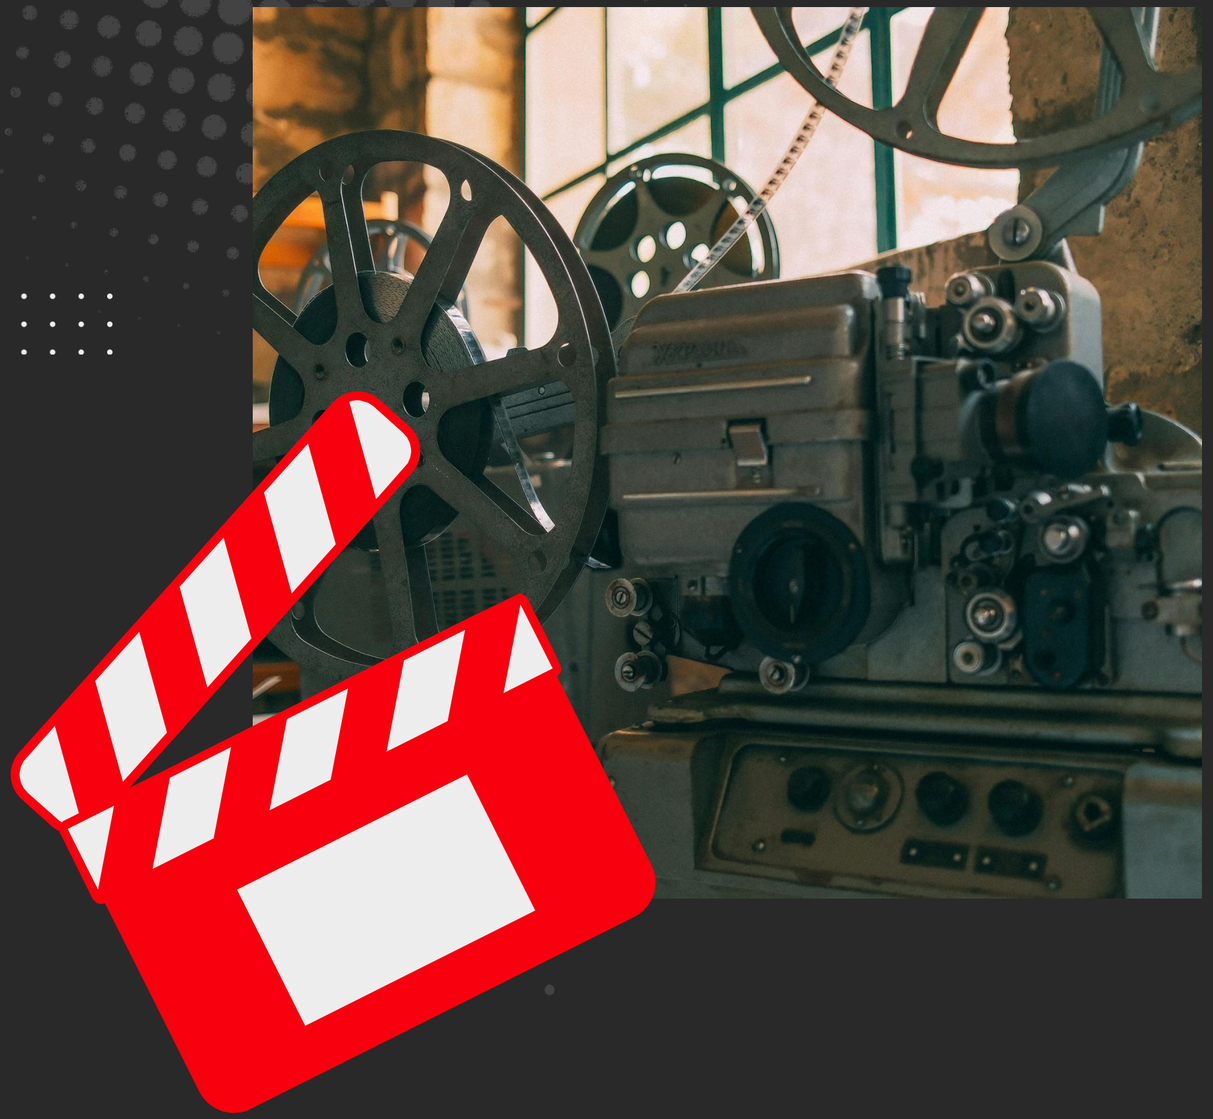
- Gauteng (36%) and Western Cape (20%) contribute the most revenue, which is likely due to their larger populations and stronger economic activity. KwaZulu-Natal (10%) and Mpumalanga (9%) are moderate contributors. Northern Cape, North West, and Free State (2–3%) show weak market penetration possibly because of smaller populations.

Active Hours of the Week

- Peak activity: Friday (16.42%) and Saturday (16.55%) which suggests that people watch more TV during their leisure time on weekends. Mid-week (Wednesday 15.39%) is strong, while Monday (9.74%) is weakest. Monday has the lowest activity, likely because most people are focused on work or school.

7. Recommendations

- Invest in high-demand sports content (e.g., secure rights for major cricket tournaments or local derbies) and reduce funding for low-performing niche channels (e.g., under-watched specialty lifestyle channels).
- Target Adults and Youth/Young Adults with tailored content (e.g., drama series for adults, reality shows or music specials for young adults) and marketing campaigns on platforms they use (e.g., TikTok, Instagram).
- Expand in underperforming provinces using localized promotions (e.g., regional discounts in Northern Cape), partnerships (e.g., local radio stations in North West), or community events (e.g., sponsorships in Free State).
- Optimize scheduling by placing premium content on high-engagement days (e.g., new movie premieres on Fridays or sports recap shows on Saturdays) and improving Monday programming (e.g., launching a new talk show or comedy block).
- Match content to peak hours by releasing new content during morning build-up (e.g., morning news, highlights packages between 6–9 AM) and featuring major live events or promotions between 10 AM–5 PM (e.g., mid-day sports matches or reality show marathons).
- Reduce investment in late-night slots where engagement is low (e.g., replace expensive shows after 11 PM with returns or automated programming).



THANK YOU
